

Nowshad Ruhani is an AI and software engineer with experience across ML, LLMs, backend systems, and cloud infrastructure. He has worked internationally in Finland, the UK, Australia, and Bangladesh, combining research and production engineering.

He has held roles such as AI Simulation Engineer at Huawei, AI Engineer in FinTech and energy, and Senior/Lead Software Engineer building scalable REST APIs, payment systems, and ML-driven features. His stack includes Python, Node.js, FastAPI, PostgreSQL, MongoDB, Redis, Docker, Kubernetes, and AWS/GCP.

He is also an active researcher with work on LLM-based medical transcription and heart disease prediction, published on arXiv, IEEE Xplore, and Theseus. He collaborates with academic labs, attends international conferences, and is completing a Master's in Information Technology in Helsinki.
